

## Enterprise Server

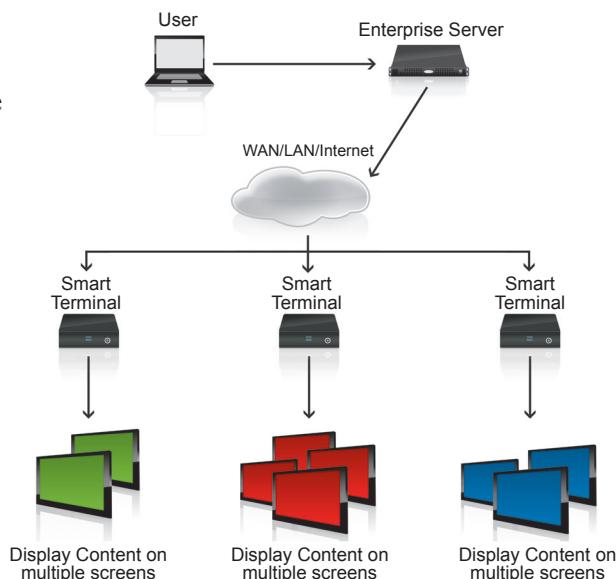

Exhibio's Enterprise digital signage system is a simple, yet powerful, content creation, management, scheduling and display system. The Enterprise system consists of both an Enterprise Server and remote Smart Terminals (STs). The system is based on Exhibio's proprietary Digital Signage Management System (DSMS) found on its popular X-Series and M-Series digital signage products.

Each Enterprise server supports up to 250 STs, each capable of displaying unique content on a screen and in each section of your display layout. Smart Terminals are managed centrally with a single log-in to the Enterprise server, and various permission sets define the abilities of the system's users. Content may be targeted to an individual or group of Smart Terminals by using tags. Enterprise supports an impressive range of 50 display resolutions, including landscape and portrait versions.

### Features

- Exhibio Digital Signage Management System (DSMS) - accessible via a web browser (no external software required).
- Centralized management of Smart Terminals (STs).
- Supports up to 250 STs per server.
- Set permissions for an unlimited number of users.
- Use of tags (i.e. location, region, time zone, etc.) for ST content targeting.
- Advanced Scheduling capabilities including customized schedules per ST.
- Emergency Alert notifications.
- Advertising and campaign reporting capability.
- Supports 50 display resolutions.
- Unlimited number of custom zone layouts.
- Displays HTML, CSS, RSS feeds, live web pages, Flash, Quicktime, Shockwave, Windows Media, Real Media, analog or digital TV, DVD, and other image and audio files.

Remote Smart Terminal
